Data-Basics Introduces the Next Generation of Mobile Workforce Software, TechAnywhere 2.0

Innovative wireless work order access tool to be exhibited at Comfortech 2005

CLEVELAND, OH — Staying ahead of the curve once again, Data-Basics Inc., a leading provider of enterprise applications for the service, construction and facilities management industries, has rolled out the next generation of its mobile workforce software, TechAnywhere 2.0. This updated component in Data-Basics' SAM Pro Enterprise software suite will be publicly exhibited for the first time at HVAC Comfortech 2005 in Nashville, Tennessee.

Wireless Work Order Access

The TechAnywhere 2.0 tool supplies field technicians with mobile access to work orders using wireless field devices, including Blackberry devices and tablet PCs. With wireless connectivity to vital information, firms will realize greater efficiency in both the field and the back office without adding to a tech's responsibilities. But what sets TechAnywhere 2.0 apart from similar industry solutions is the implementation for tablet PCs.

“TechAnywhere 2.0 is a truly unique mobile workforce software solution,” said Art Divell, CEO of Data-Basics. “The TechAnywhere 2.0 implementation for tablet PCs leverages all the benefits of a tablet, from handwriting recognition to the ability to load other software packages on one machine. Best of all, it visually emulates the paper work orders that techs are used to, helping to reduce the learning curve.”

A Fully Integrated Solution

As a fully integrated component of SAM Pro Enterprise, TechAnywhere 2.0 enables businesses to have instant, real-time access to information from the field immediately available across the entire system. In addition, by eliminating software integration issues and offering various hardware solutions, businesses can quickly implement this tool in the most cost effective solution for their wireless needs.

TechAnywhere 2.0 is also tightly integrated with Data-Basics’ Rules-Based Management technology, a tool that proactively manages routine activities and enforces rules that have been predetermined to engage a series of alarms for action. For firms that implement TechAnywhere 2.0, the Rules-Based Management technology can greatly reduce turnaround time on service calls and shrink overhead costs.

Additional product information can be found at www.databasics.com/techanywhere.
